

## **Brief Summary of NFPA 52 Report on Proposal Meeting July 17-19, 2007**

- Committee reviewed 249 public proposals to what will be the 2009 edition of NFPA 52
- Committee established positions on these proposals that will be voted on in a letter ballot and a report will be issued by 12/21/07 showing the results of the letter ballot vote
- Committee reviewed several proposals that dealt with implementing the NFPA Standards Council decision to locate hydrogen storage requirements in NFPA 55 (the next edition of NFPA 52 will either extract hydrogen storage requirements from NFPA 55 or refer to NFPA 55)
- Committee reviewed several proposal that dealt with blended natural gas/hydrogen fuels and decided to defer these to a task group that might develop a specific chapter in NFPA 52 on blended fuels
- Committee reviewed proposal on indoor fueling
- Committee reviewed several HIPOC proposals (primarily material from the draft Michigan regulations) and their preliminary action (no proposal actions are complete until the letter ballot is complete) was to designate some reserved sections of NFPA 52 that would address these topics because the material as presented in the proposals were not in a form that could not be incorporated into NFPA 52.
